Global (regional) gridded crop modeling

AquaCrop v7.1

- AquaCrop model: water-driven crop growth, agricultural management, many crop types, robust, few parameters
- Field to continental scale (de Roos et al., 2021, Busschaert et al., 2022)

A screenshot of the AquaCrop graphical user interface, showing the 'AquaCrop Crop Water Productivity Model' window with 'Start' and 'Exit' buttons.	Graphical User Interface

Regional evaluation

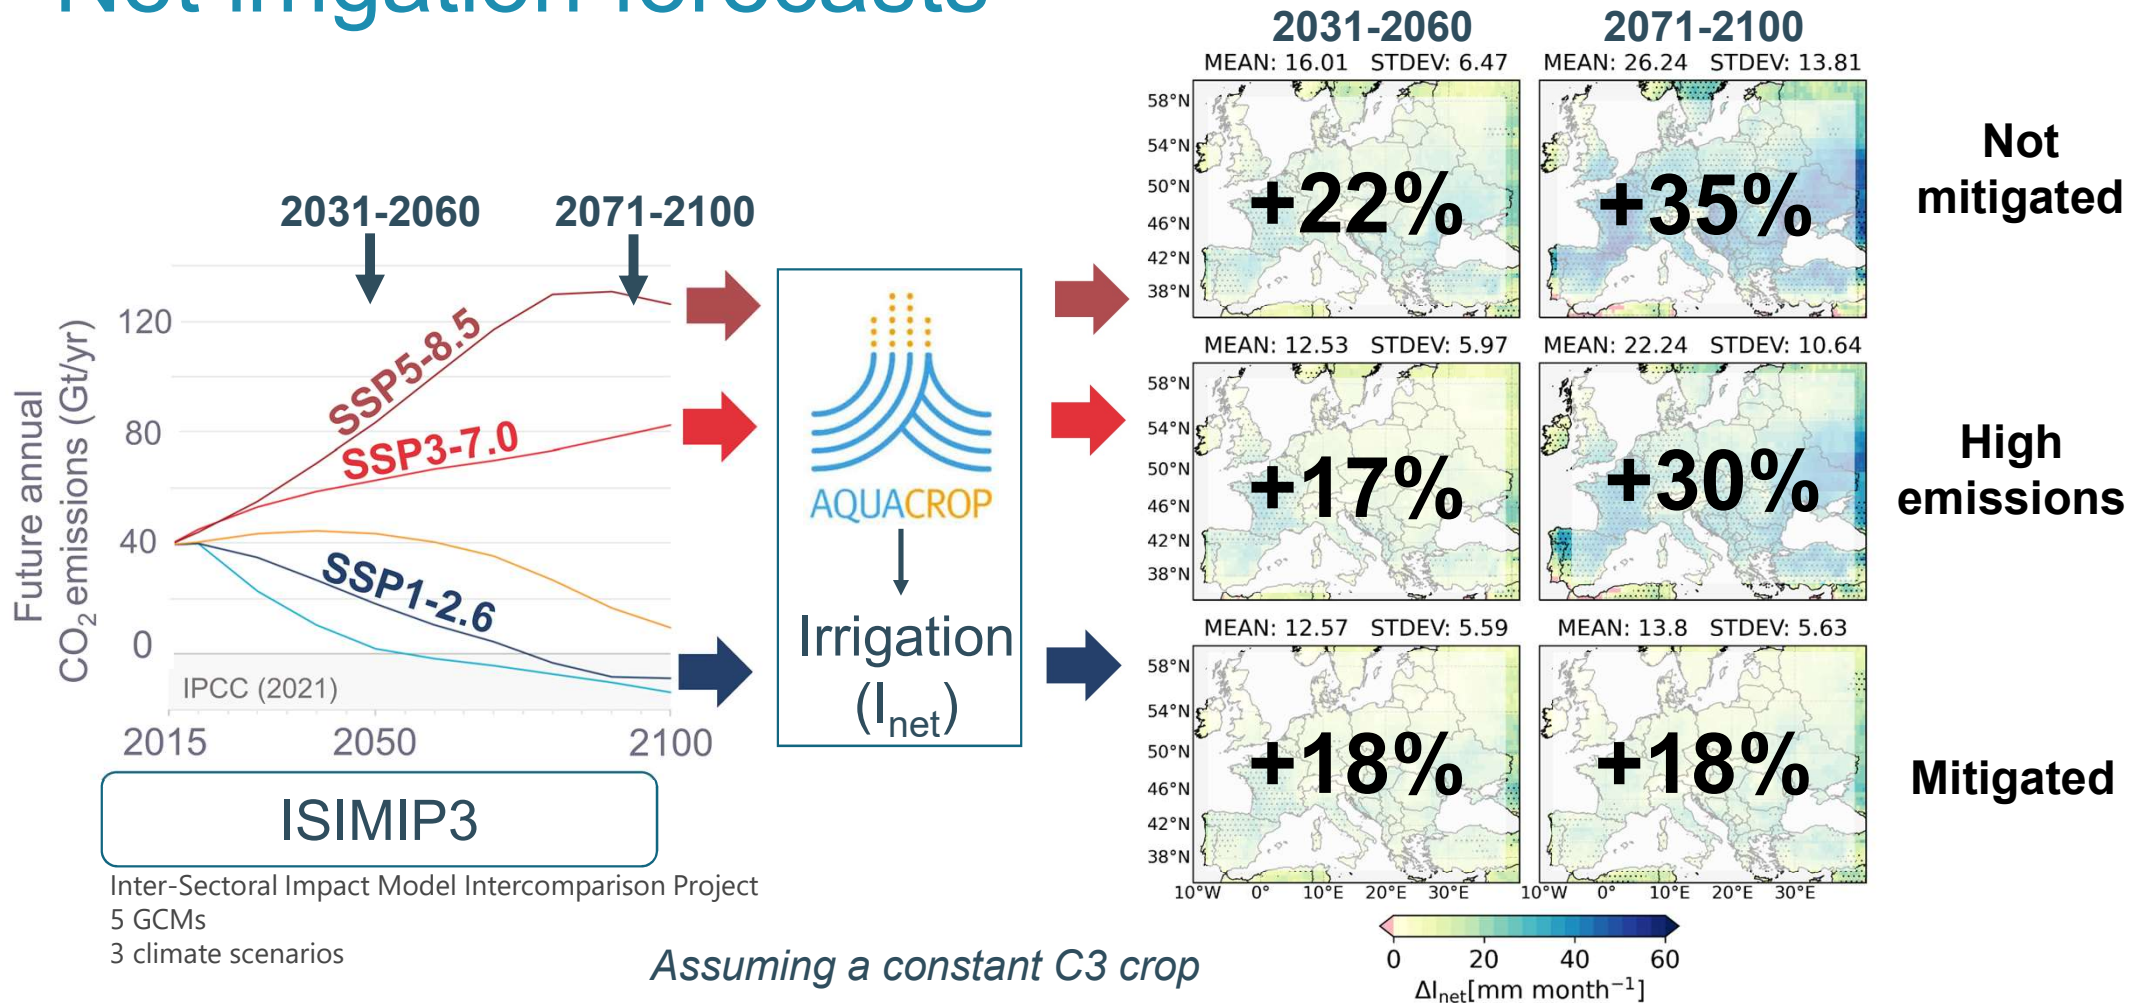

Biomass – 1 km

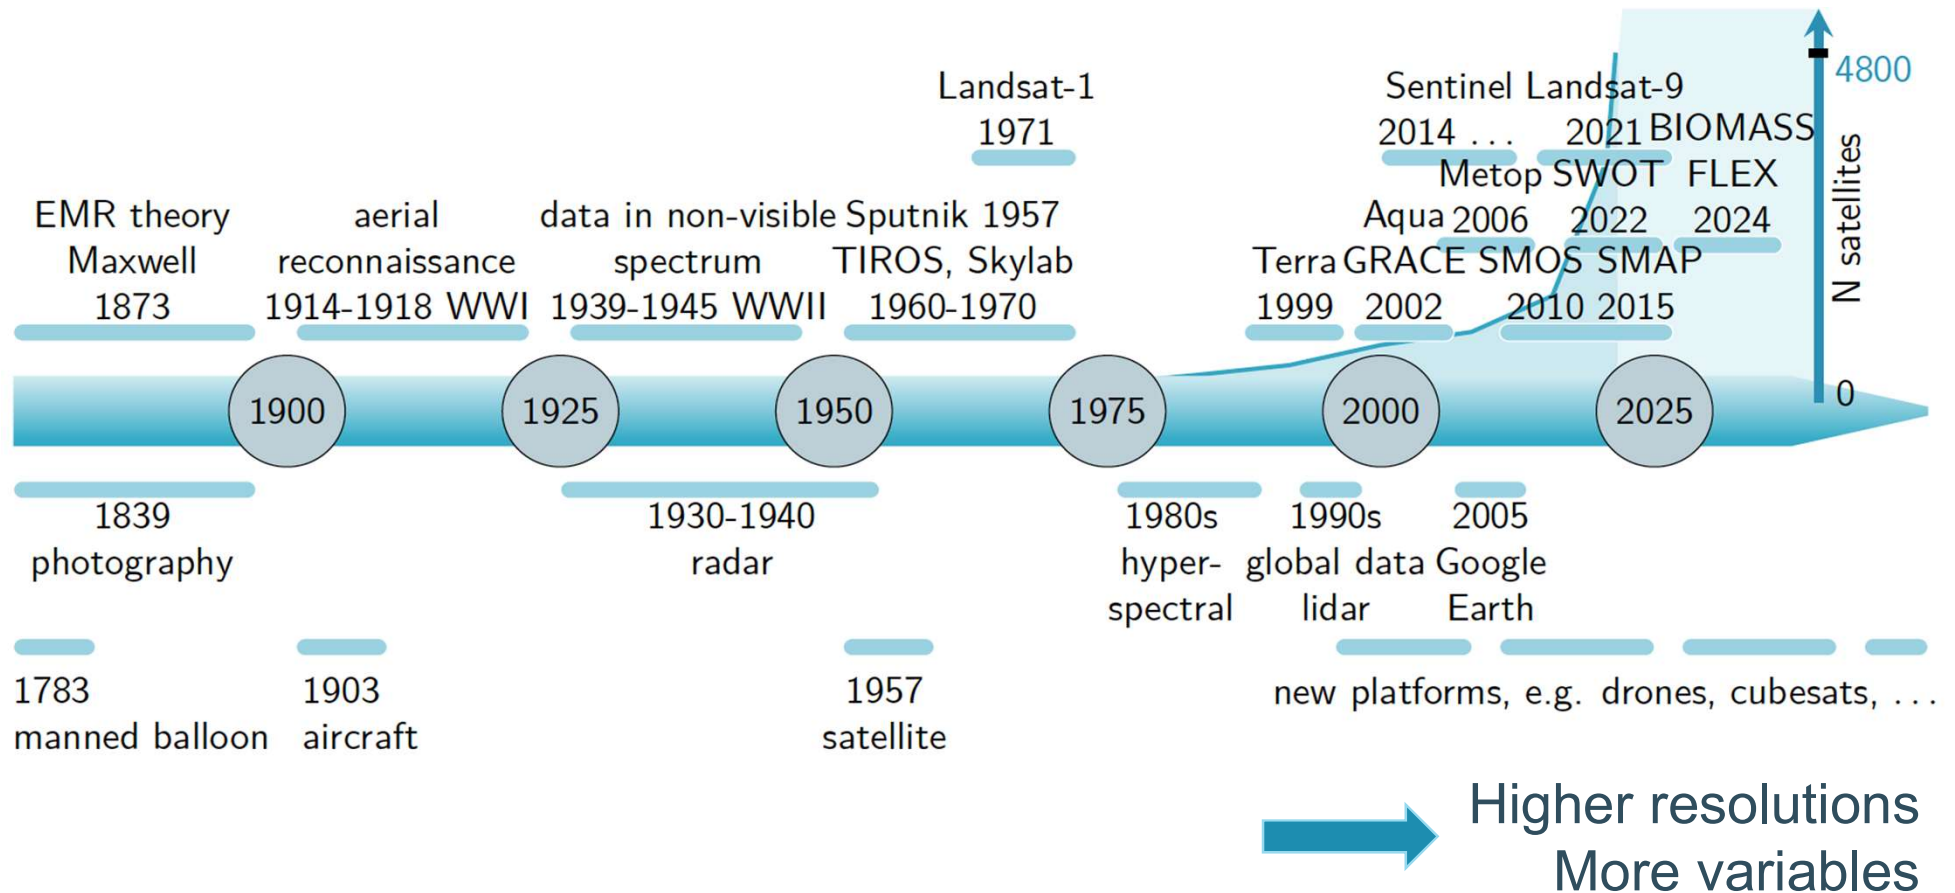

(a) Biomass [T. ha⁻¹. day⁻¹] **(b) SSM [m⁻³. m⁻³]**
ubRMSD(AquaCrop, DMP) ubRMSD(AquaCrop, SMAP)
Mean: 0.03, STDEV: 0.01 Mean: 0.06, STDEV: 0.01

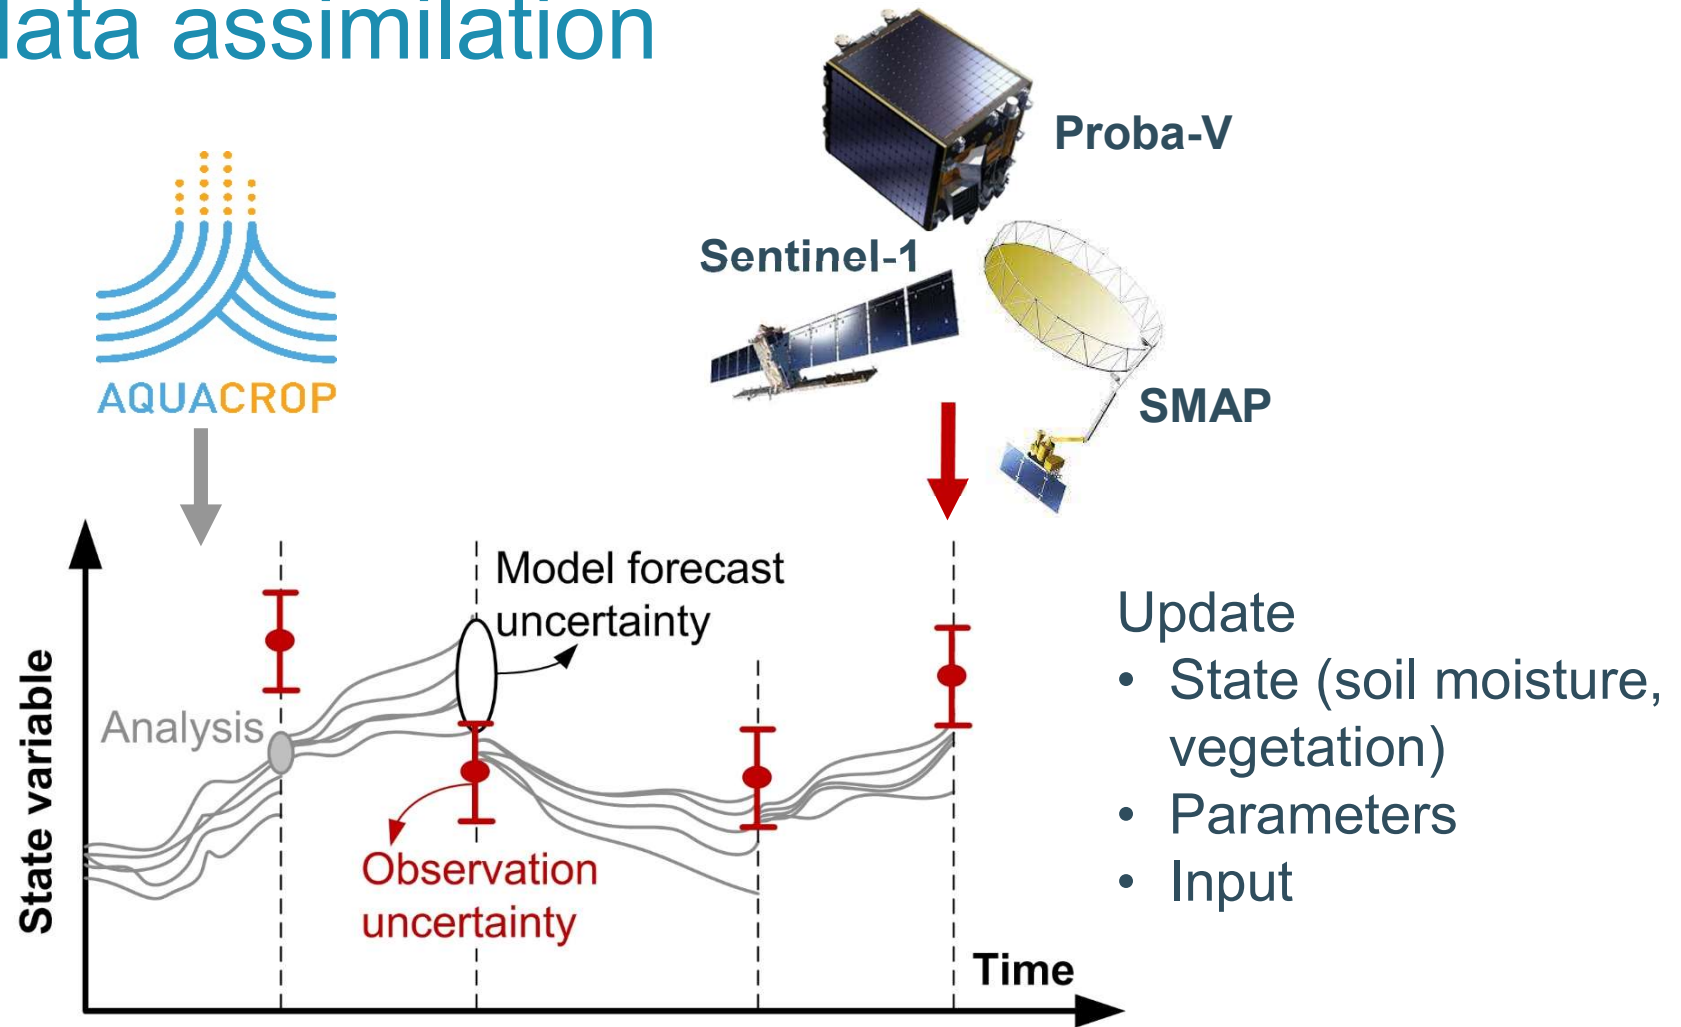

Net irrigation forecasts

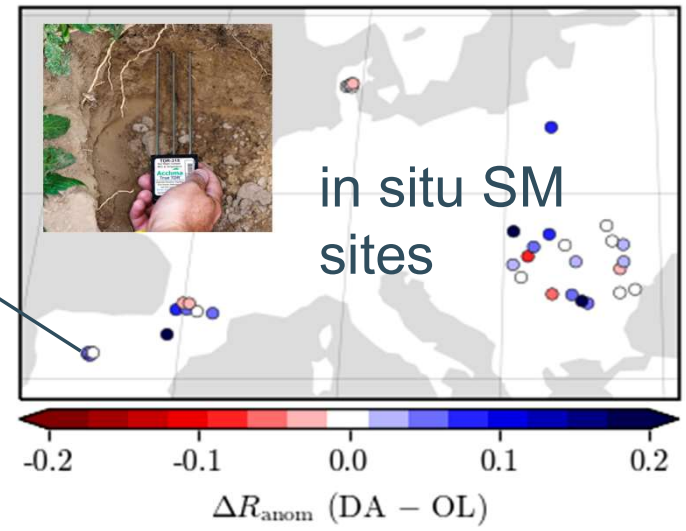

Satellite data assimilation

Satellite data assimilation

Satellite data assimilation

- Correct soil moisture
→ change in biomass
- Better soil moisture, irrigation, biomass estimation

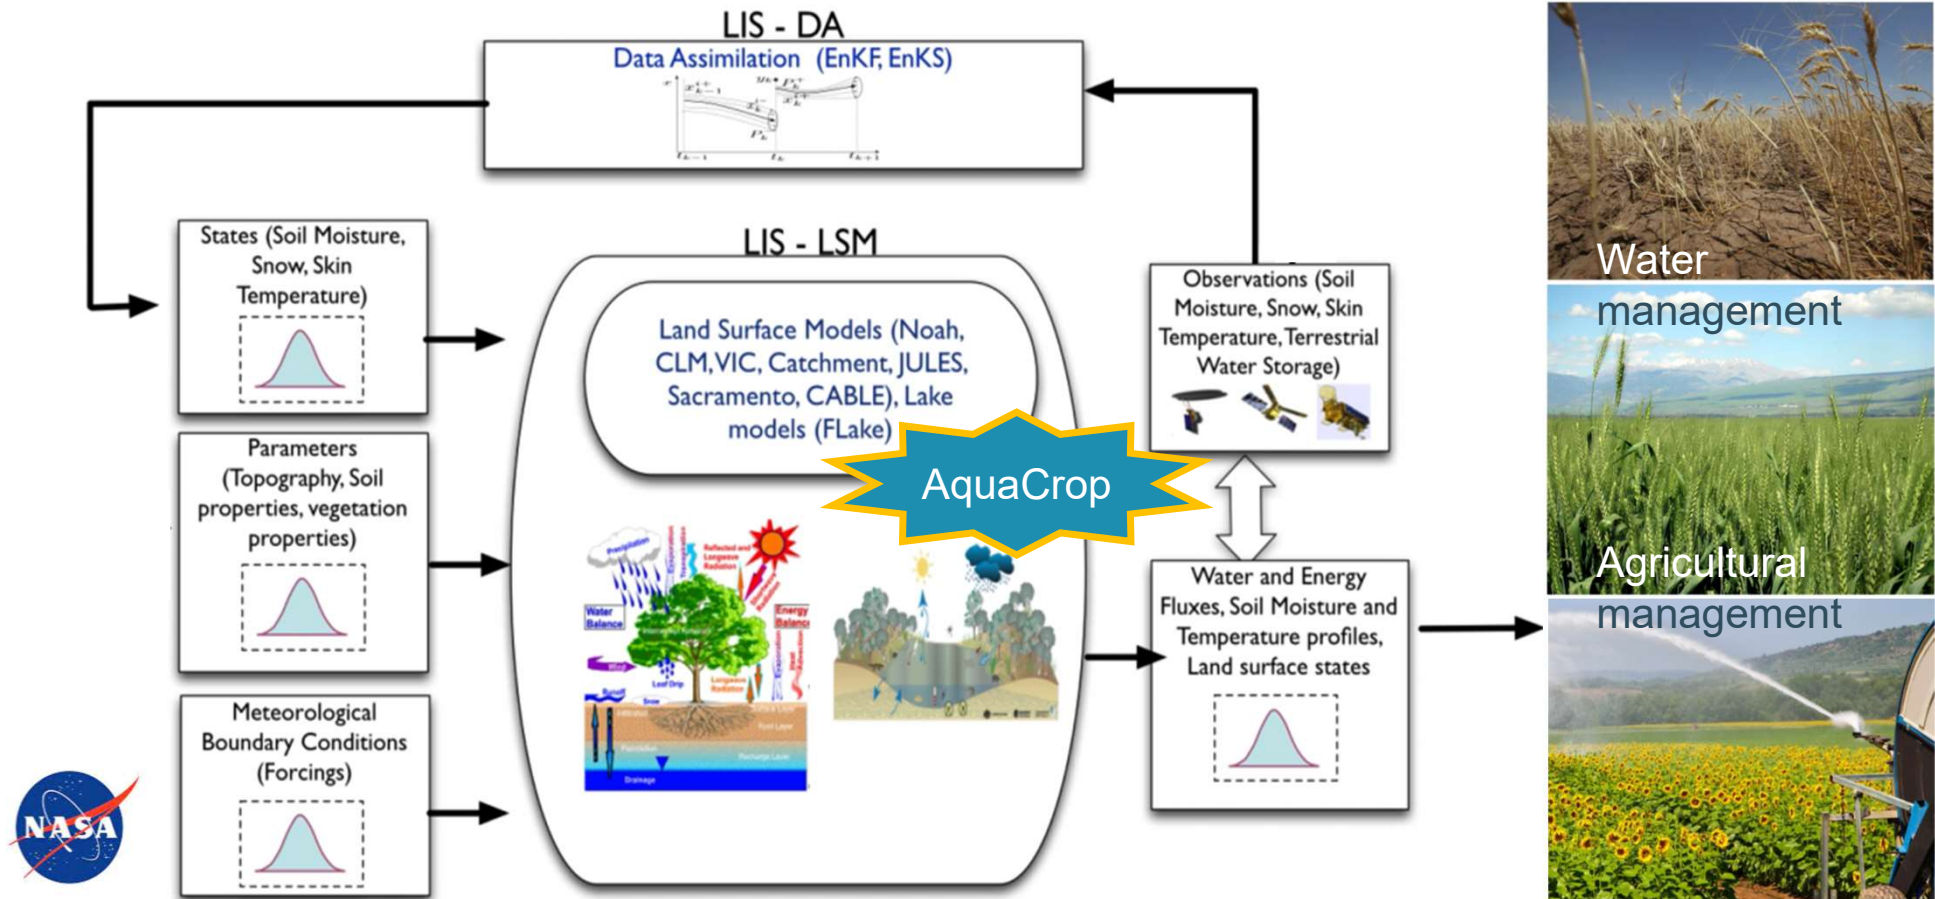

Conclusions and outlook

- AquaCrop v7.1 open source
- Flexible spatially distributed soil, meteo, crop input: **climate scenarios, satellite data assimilation**
 - impact of new crop varieties vs regional water use / irrigation needs?
- **Combine modeling and satellite data**
 - best current knowledge → informed response
- **High spatial resolutions** needed for **regional** water and agricultural management

Extra

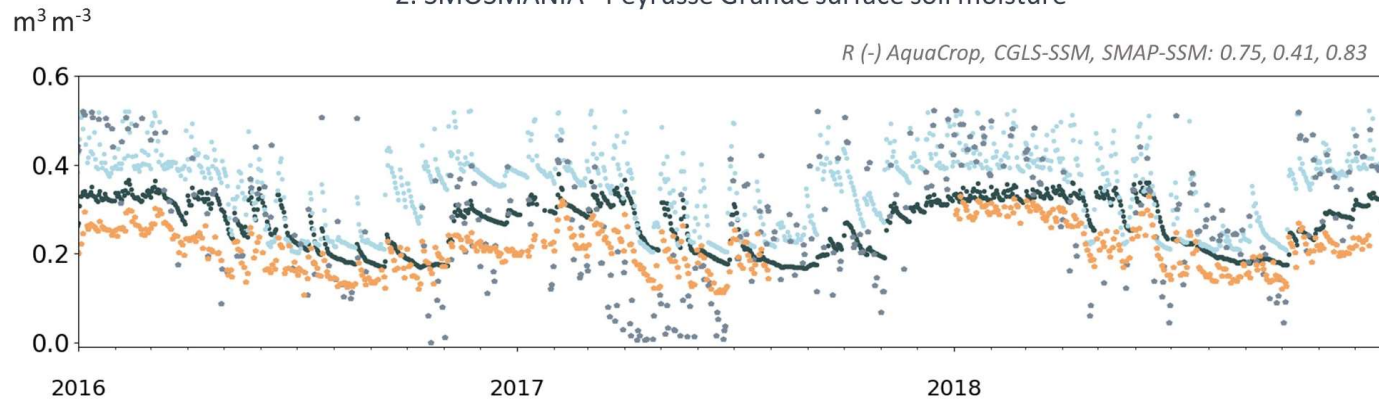

AquaCrop in NASA LIS

Regional crop modeling

2. SMOSMANIA - Peyrusse Grande surface soil moisture

3. REMEDHUS - La Cruz de Elias surface soil moisture

in situ - AquaCrop - CGLS-SSM - SMAP-SSM

Net irrigation forecasts

Future I_{net} depends on the emission scenario
but **more strongly on the GCM**
